

BASEMENT & FOUNDATION REPAIR SPECIALISTS

(LOCALLY OWNED AND OPERATED)

HOW STRUCTURALLY SOUND IS YOUR HOME?

The foundation of every home is its basement. Your basement has the vital job of supporting the entire house - from floors, walls, doors and windows, right up to the rafters and roof. When that support system is damaged or flawed, big problems can occur.

Regina homes in particular are challenged by problematic soil conditions, inadequate water drainage and environmental stress, which can cause foundations to shift, tilt and crack. This can cause serious damage throughout the home.

DON'T IGNORE THESE EARLY WARNING SIGNS

Homeowners should be on the alert for signs of foundation damage:

- Water and moisture damage: When your foundation is cracked, water and moisture can seep into your basement or crawl space. This can contribute to mold growth and musty odours.
- Structural damage: Foundation problems can cause structural damage within your home, including warped or sagging flooring. Soil movement under the foundation can also cause walls to crack and bow.

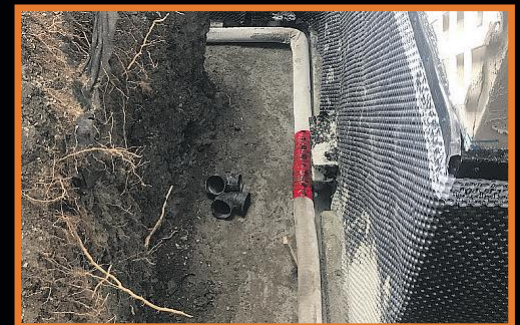

RSR TO THE RESCUE

If your foundation is showing signs of damage, the basement and foundation repair specialists at RSR Construction will come to the rescue.

We have the solutions to your foundation problems, including:
